

This document lists and otherwise details what is delivered against the subject part number.

In the Dalman factory Part numbers always have 6 digits (which may rarely be alphas) – the last digit represents the version or revision of the product; e.g. 404542 is the third issue ('0' being the first) of the product 40454. Items are always back compatible; so a 404541 can be replaced with a 404542 – but not necessarily the other way.

The latest version of the product will be shipped, unless otherwise negotiated.

**Identity: -**

What to order: -

ORDER CODE	TITLE	DoQ
10672	SATSYNC7 KIT 36-56VDC	EACH

**Description: -**

Comprising:

- 1 x 30678 Satsync7.
- 1 x 40742 GPS Rx.
- 1 x 80641 Down cable.
- 1 x 90642 Mounting bracket – this can be wall or pole mounted (fixings not included).

**Version: -**

Current version is 106721; no previous versions have been delivered.

**Usage: -**

Used in applications as required.  
Designed as a reference to drive base transmitters in simulcast PMR systems.

The GPS Rx supplies the 1PPS synchronizing input to the Satsync (GPS Rx powered from Satsync).

**Deliverables against this Order Code -**

One of the latest version of 10672; tested and set to factory default settings.
