

This document lists and otherwise details what is delivered against the subject part number.

In the Dalman factory Part numbers always have 6 digits (which may rarely be alphas) – the last digit represents the version or revision of the product; e.g. 404542 is the third issue ('0' being the first) of the product 40454. Items are always back compatible; so a 404541 can be replaced with a 404542 – but not necessarily the other way.

The latest version of the product will be shipped, unless otherwise negotiated.
