

This document lists and otherwise details what is delivered against the subject part number.

In the Dalman factory Part numbers always have 6 digits (which may rarely be alphas) – the last digit represents the version or revision of the product; e.g. 404542 is the third issue ('0' being the first) of the product 40454. Items are always back compatible; so a 404541 can be replaced with a 404542 – but not necessarily the other way.

The latest version of the product will be shipped, unless otherwise negotiated.

Identity: -

What to order: -

Order Code	Title	DoQ
30786/7/8	DRBS Switch AC/9-36VDC/48VDC	Each

Description: -

1U x 320mm rack mounting case.

Version: -

NA

Usage: -

The Solar Station Network Interface does not have facilities to be connected to dual redundant Base Stations.

The 30786 series units can be used in conjunction with a Station Network Interface to control and monitor a dual Base Station RF arrangement. It has facilities for routing/selecting audio, routing Tx Trigger, selecting RSSI source and selecting mute status source.

Deliverables against this Order Code: -
